All internal quality control requirements associated with this batch were met. The Federal lead guidelines for leaded dust clearance levels by wipe sampling; Floors (FL) - 40 µg/ft², Interior Window Sills (SL) - 250 µg/ft², Window Wells (WW) - 400 µg/ft². The Reporting Limit (RL) is 10.0 µg/ft². Reported results are not corrected for field blanks. Dust wipe area and results are calculated based on area measurements determined by the client.

Analytical results and reports are generated by BTS Laboratories at the request of and for the exclusive use of the person or entity (client) named on this report. Results, reports or copies of same will not be released by BTS Laboratories to any third party without the prior express written consent from the client named in this report. This report applies only to those samples taken at the time, place and location referenced by the client. This report makes no express or implied warranty or guarantee as to the sampling methodology used by the individual performing the sampling. The client is solely responsible for the use and interpretation of these test results and BTS Laboratories makes no express or implied warranties as to such use or interpretation. BTS Laboratories is not able to make and does not make a determination as to the environmental soundness, safety or health of a property from only the samples sent to their laboratory for analysis. Unless otherwise specified by the client, BTS Laboratories reserves the right to dispose of all samples after the testing of such samples is sufficiently completed or after a five day period, whichever is greater. This report is not intended for regulatory compliance.
